

Claims:

1. A pharmaceutical composition comprising a macrolide T-cell immunomodulator or immunosuppressant in combination or association with a calciferol, together with at least one pharmaceutically acceptable diluent or carrier.
2. A composition according to claim 1 comprising 33-epichloro-33-desoxyascomycin in combination or association with calcipotriol or tacalcitol.
3. A method of treatment of a dermatological disease such as atopic dermatitis, acne or psoriasis, or of inflammatory bowel disease (IBD), in a subject suffering from or at risk for such condition, comprising co-administering a synergistically effective amount of a composition according to claim 1.
4. A process for the preparation of a composition according to claim 1 comprising mixing a macrolide T-cell immunomodulator or immunosuppressant and a calciferol, in combination or association with at least one pharmaceutically acceptable diluent or carrier.
5. A kit of parts comprising a macrolide T-cell immunomodulator or immunosuppressant and a calciferol in separate unit dosage forms, together with instructions for use.
